

Abstract

The present invention is applied to, for example, a multimedia terminal having a function of navigation
5 equipment and a function of playing back video and switches a display from a map display to a source display also with source switching operators 13P, 13R. In addition, menus of upper and lower hierarchies are simultaneously displayed to accept operations through a
10 touch panel and a remote commander. In addition to a press-operable main rotary operator, a press-operable sub rotary operator is provided on a side surface. Among operations accepted through the main rotary operator, only a specific operation relating to content processing
15 is accepted through the sub rotary operator.
